

Viktoriya Khanieva

Senior Java Backend Engineer — Financial Services · 8+ Years

vikhanieva@gmail.com | linkedin.com/in/vikhanieva | github.com/vikhani | vikhani.github.io/resume

SUMMARY

Backend engineer with **8 years of experience in commercial development** — the last 4 years in Java backend for banking and insurance, and 4 years before that in C++/C# building a static code analyzer used to catch bugs and vulnerabilities in production codebases. Comfortable stepping into **temporary team lead** duties: planning releases, splitting up work across a **7-person team**, and making sure things ship.

Current stack: Java 21, virtual threads, Spring Boot / Cloud / Data, Hibernate, PostgreSQL, Redis, Kafka, Kubernetes, Resilience4j

CORE SKILLS

Languages & Frameworks: Java (8–21), Spring Boot, Spring Cloud, Spring Data, C#, C++
Data & Messaging: PostgreSQL, MySQL, Redis, Apache Kafka, Hibernate, Liquibase, MyBatis
Infrastructure: Kubernetes, ArgoCD, GitLab CI, OpenShift, Docker, Resilience4j
Testing & Quality: JUnit, Mockito, Testcontainers, WireMock, static code analysis (SAST)
Leadership: Interim team lead, release planning, code review, mentoring, technical documentation
Languages: English (C1 / Advanced), Russian (Native)

EXPERIENCE

Senior Java Developer — Sovcombank

Mar 2024 – Present (2 yrs 7 mo)

One of Russia's largest privately-owned banks (10M+ retail clients). Backend for a mobile insurance app — microservices handling policy issuance, payment, and pension fund flows.

- Fixed a **race condition** in policy issuance/payment by moving the flow to a transactional inbox pattern (Kafka-PostgreSQL) — **eliminated issuance errors** and simplified incident debugging
- Fixed a DB connection-pool exhaustion causing wide API degradation on the core insurance service — narrowed transaction scope, **cutting latency by ~85-90%**
- Built the endpoint behind a main-screen product widget — **highest-traffic call in our API at 1.3M requests/day, ~35 req/s at peak** — using Resilience4j and Redis caching for latency and resilience
- Own release prep and deployment end-to-end: build, packaging, rollout via Kubernetes and ArgoCD/GitLab CI
- Design and stand up new microservices from scratch, including security review sign-off
- Covered as team lead** during absence — planned releases, prioritized work across a **7-person team** (2 devs, 3 analysts, 2 QA)
- Run team retros and a technical book club (Kafka, Designing Data-Intensive Applications)
- Built a prototype toxic-comment moderation service using DJL for BERT inference, with MinIO/S3 storage
- Write unit/integration tests (JUnit, Mockito, Testcontainers, WireMock), review code, join incident postmortems, resolve infosec findings

Java Software Engineer — SENLA (Software Engineering Laboratory)

Mar 2023 – Mar 2024 (1 yr 1 mo)

Intermediary banking service aggregating data across integrations and checking loan offers for business customers, built for one of the **top banks in Russia**.

- Built a health-monitoring service for the aggregator and its dependent microservices
- Took part in architecture decisions and service design; built REST APIs and integrations with adjacent microservices
- Covered the codebase with unit and integration tests (JUnit, Mockito, Testcontainers)
- Set up technical documentation practices for the project **from scratch**
- Wrote a **200+ page Java reference guide** for onboarding junior developers; gave an internal talk on Spring Cloud

Stack: Java 17, PostgreSQL, MyBatis, Liquibase, Kafka, OpenShift

Java Developer — Diasoft

Jul 2022 – Mar 2023 (9 mo)

Back-office gateway processing thousands of payment documents, enriching and validating them against current legislation. Used in **2 of the top-10 banks in Russia**.

- Kept the codebase backward-compatible with Java 6 for clients on older platform versions
- Refactored and developed payment document processing logic, with test coverage
- Fixed issues surfaced by static code analysis
- Set up technical documentation that **significantly cut onboarding time** for new hires

PVS-Studio LLC — 4 yrs 3 mo

C# Developer

May 2019 – May 2022 (3 yrs 1 mo)

Developed an internal CRM system (Blazor + PostgreSQL); owned the backend mail-generation system, migrated the statistics report system to the new CRM, and converted data from the old CRM database (MySQL → PostgreSQL)

Developed internal CusDev automation services — one decision **increased customer retention by 30%**

Designed and implemented a reports generation system pulling from Bitbucket/YouTrack, CRM, SVN, and Jenkins to support business decisions, incorporating management and stakeholder feedback

Joined client calls and mentored new hires

C++ Developer

Mar 2018 – May 2019 (1 yr 3 mo)

PVS-Studio is a static analyzer for code quality, security (SAST), and code safety.

- Developed and supported general-purpose and MISRA-based diagnostic rules for the static analyzer
- Conducted algorithmic research for analyzer optimization
- Wrote marketing articles targeted at developers

EDUCATION

Tula State University

Sep 2015 – Jul 2019

Bachelor's degree, Computational and Applied Mathematics

Additional Certification: Translation in Business Communications
